ADT Always There®

achieve comprehensive compliance

ADT – government's trusted security partner

ADT has been named a *Qualified HSPD-12 System Integration Service Provider* by GSA, qualified to provide end-to-end HSPD-12 and FIPS-201 System Integration Services for federal agencies.

HSPD-12: The Challenge at Hand

After more than 90 years of providing security solutions to the federal government, ADT is uniquely positioned to deliver comprehensive credentialing platforms compliant with HSPD-12/FIPS-201. We are experienced at helping to secure critical infrastructures, from the gate to the network. ADT Federal Systems Division, government's trusted security partner, is your end-to-end resource for HSPD-12/FIPS-201 compliance.

The HSPD-12 Objective: Initiate Personal Identity Verification (PIV) programs and credential issuance while establishing interoperability between government facilities and systems.

Your HSPD-12 Mission: Create a comprehensive PIV management platform that increases the effectiveness of the credentialing initiatives and extends your agency's ability to protect critical infrastructure, assets and people.

Your HSPD-12 Deadlines:

- **October 27, 2006:** agencies begin to issue PIV cards to identity-verified employees
- **October 1, 2007:** complete identity verification for current federal and contractor employees
- **October 1, 2008:** complete identity verification for employees employed over the past 15 years

Realize HSPD-12/FIPS-201 Compliance Success with ADT

As government's trusted security partner, ADT understands the practical realities of large scale, integrated systems and service.

With our extensive experience and resources, ADT has the processes, procedures and protections to help securely manage and protect data and other sensitive information associated with individuals, business and governments. No matter how long or short your migration path, ADT is able to help you meet your mission requirements with the right software, hardware and managed services.

ADT offers:

- Over 220 Service Centers and 26,000 employees worldwide
- Classified monitoring and operating facilities
- A workforce of secret and top secret cleared personnel
- Certified program managers and Six-Sigma certified personnel
- Five redundant and load-balanced call centers, supporting over 6 million customers
- Security monitoring from a world leader
- Total security solutions including intrusion, fire protection, video surveillance, access control, critical condition monitoring, electronic article surveillance, RFID and integrated systems

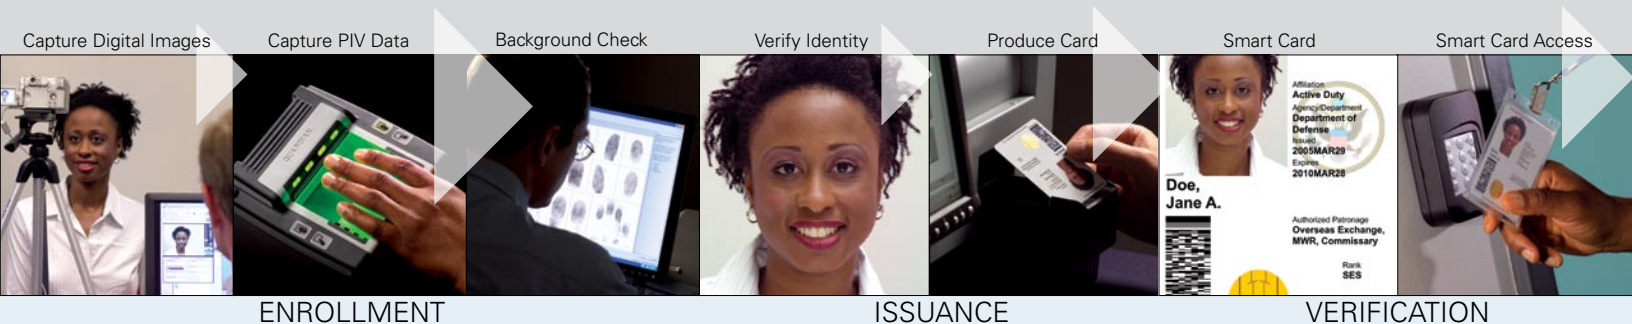

Our Answer: ADT Sure Pass™ Identity-Access Management Platform

Because every agency's path to compliance has a unique starting point, ADT offers a complete range of access-control and card-management solutions to help you achieve HSPD-12/FIPS-201 compliance efficiently and on time.

- Enrollment
- Data capture
- Card issuance/usage
- Card/certificate lifecycle management
- Card application/content management

ADT Sure Pass™

your one-source, end-to-end solution

From physical to logical security, you can achieve HSPD-12/ FIPS-201 compliance with ADT Sure Pass™ Identity-Access Management Platform and ADT, the largest provider of electronic security systems to defense and civilian government agencies.

Sure Pass™ hardware components:

- Win XP Pro computer with accessories that support all required functionality for PIV enrollment and issuance
- Contact and contactless RF PIV card reader
- 378-template fingerprint reader
- 10-print live scan-capture device and minutia template software
- 500dpi digital camera with flash and accessories and operating supplies
- PIV card role-based control of enrollment and issuance functions
- Breeder document scanners
- Credential printers (graphical and electrical personalization)

Sure Pass™ software/middleware:

- [Sure Pass™ Card Management System \(CMS\)](#): for managing the smart card and credential lifecycle
- [Sure Pass™ PIV Card Applet](#): fully compliant with the PIV data model
- [Sure Pass™ ADT Card Applet](#): supporting several logical access control applications
- [Sure Pass™ Client Middleware](#): supporting user authentication based on PIV Card Applet
- [Sure Pass™ SDK](#): a set of high-level Application Programming Interfaces (APIs) that may be used for the development of new smart card applications

Software deployed as a component of the Sure Pass™ platform seamlessly extends existing IT and security infrastructures to facilitate the issuance, administration and lifecycle management of PIV cards.

Sure Pass™ support:

- Five cross-redundant monitoring station call centers
- Open 7x24x365

Sure Pass™ features and benefits:

- Ability to:
 - Scan documents
 - Populate fields from electronic data
 - Conduct name matching
 - Capture biometrics
- Wide range of user enrollment scenarios
- Integrated physical and logical systems
- Scalable and interoperable
- Compliance with regulatory requirements
- Strong authentication
- Ability to support a variety of SSPs (Shared Service Providers) and CAs (Certificate Authorities)

Sure Pass™ faithfully follows the FIPS-201-1 standards, allowing true, end-to-end compliance with HSPD-12.

Because Sure Pass™ uses a single credential for all corporate security applications, your agency can anticipate an enhanced user experience and cost savings over previous systems. Most importantly, you can count on ADT, government's trusted access-control security partner, to help your agency bridge the gap to the IT-centric mandate of HSPD-12-compliant access.

Leverage our proven and time-tested security integration knowledge

U.S. Department of Justice – U.S. Marshals Service (USMS)

For 14 years, ADT has successfully acted as the trusted security partner and integrator for the USMS physical security equipment program, providing security for more than 800 federal courthouse facilities and for the personal residences of federal judges nationwide.

Washington DC Government – Citywide Credentialing Program

ADT is currently managing the credentialing services and technical support of the DC government physical access system with a smart card-based system.

State of Florida – Transportation Workers Identity Credential Pilot Program

ADT implemented an access-control system that reads credentials belonging to employees and truck drivers, validates biometrics and verifies data against a centrally-managed access control database.
